Cover photos by George D. Gann: Top: mahogany mistletoe (*Phoradendron rubrum*), a tropical species that grows only on Key Largo, and one of South Florida's rarest species. Mahogany poachers and habitat loss in the 1970s brought this species to near extinction in South Florida. Bottom: fuzzywuzzy airplant (*Tillandsia pruinosa*), a tropical epiphyte that grows in several conservation areas in and around the Big Cypress Swamp. This and other rare epiphytes are threatened by poaching, hydrological change, and exotic pest plant invasions.

Funding for *Rare Plants of South Florida* was provided by The Elizabeth Ordway Dunn Foundation, National Fish and Wildlife Foundation, and the Steve Arrowsmith Fund.

Major funding for the *Floristic Inventory of South Florida*, the research program upon which this manual is based, was provided by the National Fish and Wildlife Foundation and the Steve Arrowsmith Fund.
