human impact on a native ecosystem or offset the impact, either on the site where the impact occurs or at another location

Mosaic - a pattern of vegetation in which two or more different plant communities are interspersed in patches

Natural area - an area containing one or more aquatic, terrestrial, or transitional ecosystems or a combination of ecosystems that has essentially retained its primitive conditions; an area that is a least-disturbed known example of a type of natural ecosystem

Nature trail - a hard-surfaced, handicapped-accessible walking trail with interpretive signage

Off-road vehicle - a vehicle capable of traveling in roadless areas

Outstanding Florida Water - a water body designated by the State of Florida Environmental Regulation Commission as worthy of special protection because of its natural attributes

Passive recreation - any recreational activity which has minimal or no impact on natural resources or ecosystems, such as trail-walking, photography, and plant and wildlife observation

Physiographic region - a region delineated by a specific topography

Pyric community - a community resulting from, induced by, or associated with burning

Relict population - a remnant population of a species that once was widespread

DEFINITIONS OF LISTING CATEGORIES USED IN TEXT

United States Fish and Wildlife Service (USFWS)

Species listed on the United States *List of Endangered and Threatened Wildlife and Plants* and protected under the provisions of the Endangered Species Act of 1973, as amended (Publication No. 93-205 [89 stat. 884]).

Endangered (E) Listed as an Endangered Species in the *List of Endangered and Threatened Wildlife and Plants*. Defined as any species which is in danger of extinction throughout all or a significant portion of its range.

(E) (S/A) Endangered due to similarity of appearance.

Threatened (T) Listed as a Threatened Species on the United States *List of Endangered and Threatened Wildlife and Plants*. A Threatened Species is defined as any species that is likely to become an Endangered Species within the foreseeable future throughout all or a significant portion of its range.

Florida Game and Fresh Water Fish Commission (FGFWFC) - Animals

Species listed and protected under Section 39-27.03-05, Florida Administrative Code.

Endangered (E) Listed as an Endangered Species by the FGFWFC. Defined as a species, subspecies, or isolated population which is so rare or depleted in number or so restricted in range of habitat due to any man-made or natural factors that it is in immediate danger of extinction or extirpation from the state, or which may attain such a status within the immediate future.

Threatened (T) Listed as a Threatened Species by FGFWFC. A Threatened Species is defined as a species, subspecies, or isolated population that is (1) resident in Florida during a substantial portion of its life cycle and is acutely vulnerable to environmental alteration, declining in number at a rapid rate due to any man-made or natural factors, and as a consequence, is destined or very likely to become an Endangered Species within the foreseeable and predictable future unless appropriate protective measures or management techniques are initiated or maintained; or (2) migratory or occasional in Florida and included as a Threatened Species on the United States *List of*

penguins and seals

Ruderal - a species which generally is considered to be native, but often grows in disturbed areas

Saltwater intrusion - the introduction of saltwater into a previously fresh water aquifer as a consequence of disturbance of the water pressure in the aquifer; saltwater intrusion often is associated with excessive pumping of wells

Seed rain - a sudden dispersal of seeds, which can be triggered by fire or another extreme environmental event

Seral stage - one of the stages in a series of more or less predictable changes in vegetation and animal life as one kind of ecosystem is replaced by another

Soil phase - a subdivision of a soil type that deviates from the typical character of the soil type

Sovereign lands or sovereignty lands - those lands including, but not limited to: tidal lands, islands, sandbars, shallow banks, and lands waterward of the ordinary or mean high water line, to which the State of Florida acquired title on March 3, 1845, by virtue of statehood, and of which it has not since divested its title interest

Subcanopy - the layer of shrubs or trees that is below the canopy, or uppermost layer of vegetation in a forest or woodland

Systemic herbicide - a chemical agent used to destroy or inhibit plant growth that is absorbed into and is effective throughout the entire organism

Taxon (plural - taxa) - a general term for any taxonomic category (for example, a species, genus, family, or order)

Transect - a long, narrow area used for sampling vegetation or counting animals; transects are used for the collection and analysis of data such as frequency of occurrence, size, or number of organisms or kinds of organisms

Transitory taxon (plural - taxa) - a species that is present on a site only for a brief period, often as a response to changing environmental conditions

Vegetative community - the plant component of an ecosystem

Viability - the capability of a seed or organism to grow and develop or the capability of a population of a species or a biological community to reproduce and maintain itself indefinitely

Water table - the level below which soil is saturated with water; the surface of the zone of saturation

Xeric - an environment or habitat that is low or deficient in moisture
